

EXAMPLE (mock-up, synthetic data): mechanism-oriented drop-test figure

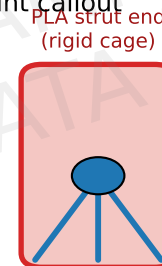

(a) Processed drop-test response

(b) Specimen under test (T3 prism)

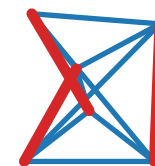

(c) Joint callout

TPU cables join inside,
exit via outlets

(d) Phase B: compressed

Callouts link the signal to the mechanism:

- (b) red = PLA struts (compression), blue = TPU cables (tension); circled strut end is detailed in (c).
- (c) cables anchor INSIDE the strut end, which acts as a rigid cage – the load path that flattens the peak in phase B.
- (d) snapshot at the phase-B plateau, where strut buckling and cable re-tensioning spread the impulse over time.
